

1

Door lock installation steps:
The first step of lock installation is to insert the lock body s1 into the door frame with the holes drilled, and use an electric drill to drive the dovetail screw g into the door frame to install the lock body s1

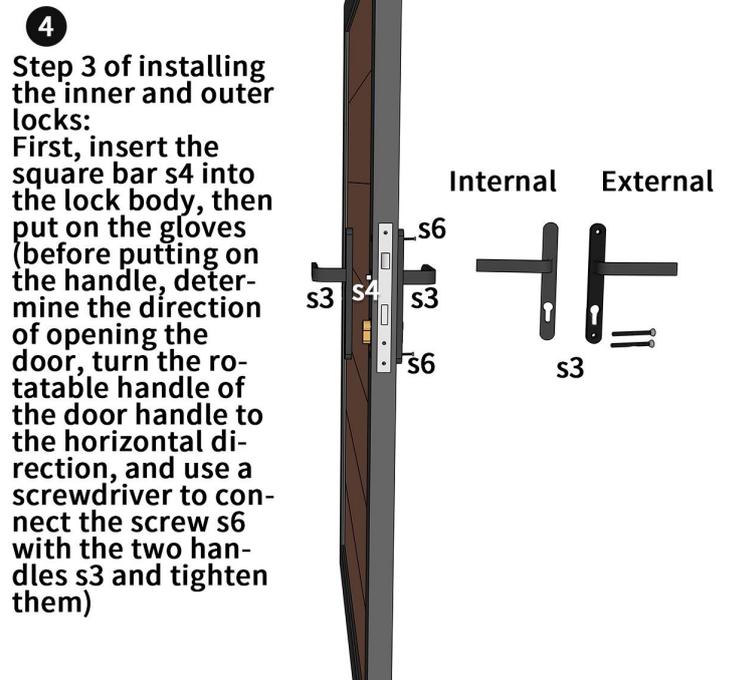

2

Step 2 of lock installation
Insert Lock 2 into the lock body and screw it onto the lock core from the side of the lock body with screw s5

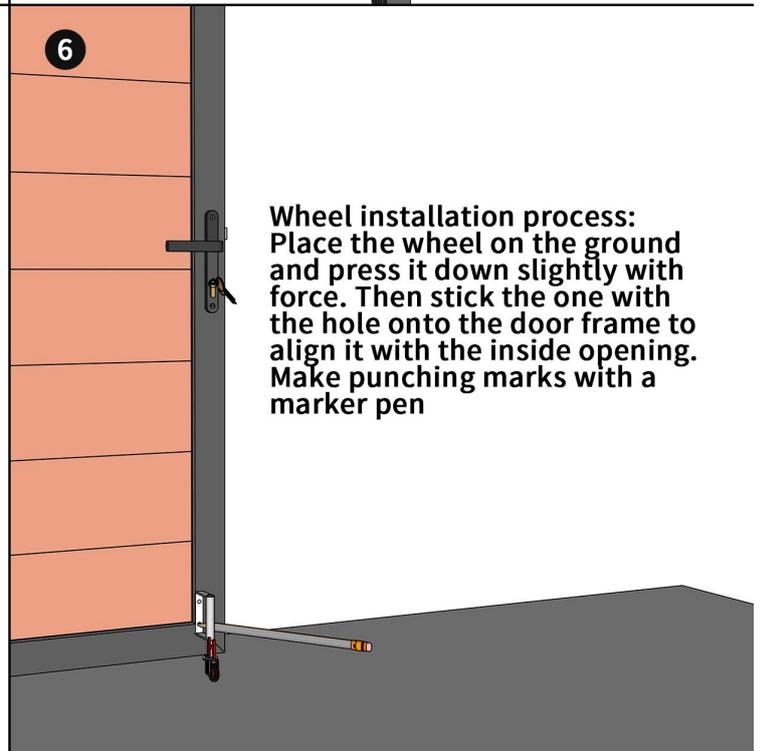

3

The second step of lock installation:
Insert lock s2 into the lock body and screw it onto the lock core from the side of the lock body with screw s5

4

Step 3 of installing the inner and outer locks:
First, insert the square bar s4 into the lock body, then put on the gloves (before putting on the handle, determine the direction of opening the door, turn the rotatable handle of the door handle to the horizontal direction, and use a screwdriver to connect the screw s6 with the two handles s3 and tighten them)

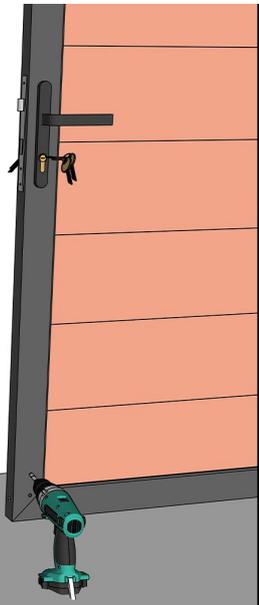

5

6

Wheel installation process:
Place the wheel on the ground and press it down slightly with force. Then stick the one with the hole onto the door frame to align it with the inside opening. Make punching marks with a marker pen

7

Wheel installation process Two:
Drill the hole with an electric drill

8

Wheel installation process three:
Align the screw holes of the wheels
with those of the door frame, then
insert the screws and tighten the
nuts with a wrench
